Data Center Solutions

Engineered solutions that ensure seamless connectivity to data centers

We specialize in the design, construction, and delivery of prefabricated and integrated modular building solutions for a variety of data center applications.

Streamlined, Scalable, Secure.

- Material-only kits for assembly on site
- Preassembled building shell with or without a floor system
- Prefabricated with basic house electrical systems provided
- Fully integrated and engineered turnkey OEM solutions

Applications

- Power Modules
- IT Modules
- Hyperscale
- Enterprise
- Utility Scale
- OEM Integrated Packages

Work with the Data Center Experts.

- Custom design from site-built kits to modular pre-assembled solutions.
- Self-framing & Channel-frame style buildings meet customer specifications.
- Engineered for environmental conditions of final site location including coastal and dust environments, seismic, snow, and wind loads.
- Electrical equipment installed and tested, including integration of customer supplied equipment.
- Option to add ballistic and electromagnetic pulse (EMP) protection to any building design.
- Project Management from order acceptance to delivery and post-sale support.
